

Cybersecurity: Consultancy

Introduction

Some organisations are simply not at the scale to require a fulltime Chief Information Security Officer; for other organisations their CISO could really just do with another pair of hands. Sometimes you don't need a neat packaged-service, but you just need some help with a project.

Whatever cybersecurity challenge your organisation is facing, we offer cybersecurity consultancy which can help.

Consultancy Services

Cybersecurity Capability Review

If you're looking for an independent review of your cybersecurity stance, looking at organisation maturity across key areas our capability review will deliver just that.

Board Advisory Service

Companies put their staff through security awareness training, but what is your security team doing to support your organisation's board? Our advisory service aims help your business leaders understand today's threat landscape.

Vulnerability Management

Bypassing file restrictions to upload malicious files to gain command execution on vulnerable web servers and to pivot into DMZ and internal networks.

Incident Response Testing

When was the last time you dusted off your disaster recovery and incident response plan? How do you know it's appropriate for the risks of today? Incident response testing, commonly known as "Wargaming" can give you confidence in your plan, or guidance on improving it.

AKIMBOCORE

INFORMED - SECURED

Incident Response Scenario Testing

“Wargaming”

Wargaming is as a table top exercise, working through a realistic cybersecurity scenario to see how your organisation would react. From following through your incident response methodology, to thinking on your feet when things don’t go according to plan.

A scenario will be presented to the group and adjusted through injects, in real-time as they work through the steps. In a real incident you rarely have all the information to start and managing information gathering, attack mitigation, and public relations, all at the same time can be a challenge. This service lets you try out your response plan, before it’s needed for real.

Cybersecurity Capability Review

If you’re looking for an independent review of your organisation’s security stance, our capability review will deliver that. We review the following key areas:

Design	Implementation	Monitoring	Response
Security Policy	Gold Builds	Logging and Monitoring	Incident Response Plan
Asset Management	Policy Implementation	Alert Generation	Disaster Recovery Plan
Awareness Training	Vulnerability Management	Behavioural Analysis	Incident Scenario Testing
Network Architecture	Security Testing	Threat Hunting	Backup Solution
	Network Segmentation		

WHY AKIMBOCORE?

AkimboCore are a cybersecurity firm that have been innovating on security testing services since 2019. We’re not a generic consultancy trying to cover a broad range of services, we’re focused on cybersecurity.

Our team has many years of experience working through complex security products, assessing complex projects for security improvement, and guiding organisations to a higher level of cybersecurity maturity.
