Asset Hardening

THERE IS MORE TO CYBER DEFENCE THAN STRONG PERIMETERS. WE TRACK YOUR ASSETS TO ENSURE THEY ARE HARDENED AGAINST ATTACKS

THE PROBLEM

Many organisations focus their attention on perimeter security, however, with the potential for targeted phishing attacks, insider threats, and a remote workforce – the idea of relying on a strong perimeter is outdated.

Organisations need to make sure that their assets are protected from attack from all angles – including when staff are working remotely, or from home.
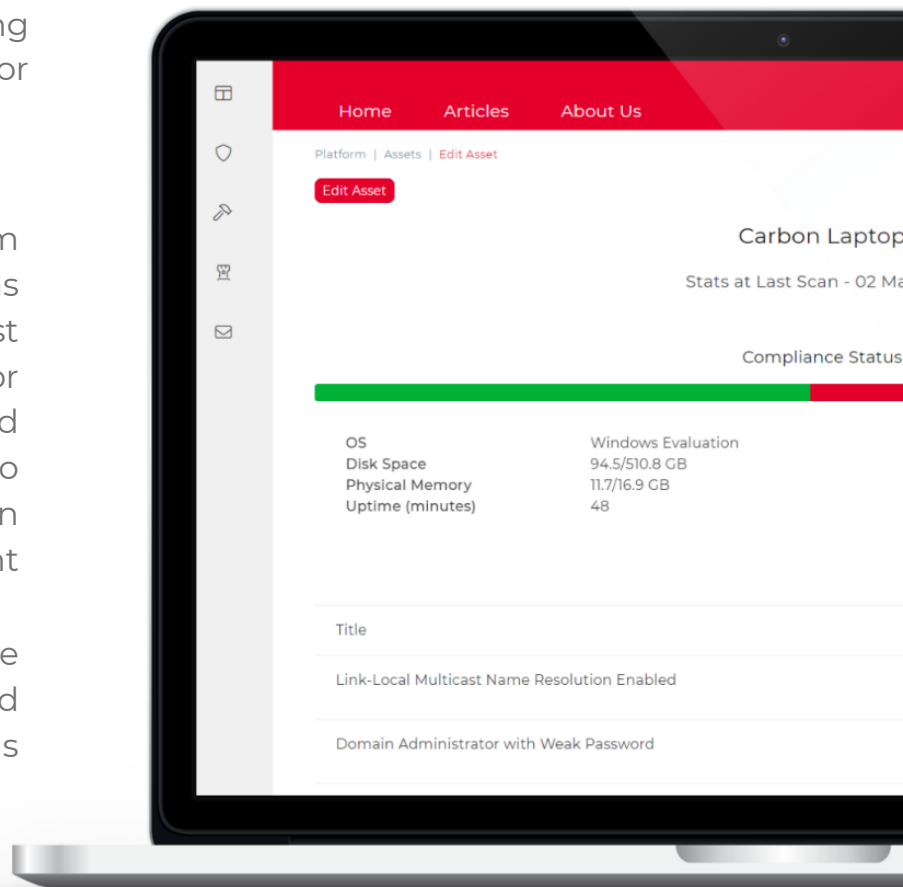

OUR SOLUTION

Our asset monitoring system continuously monitors your systems to ensure they are hardened against attack. Tracking their vendor support and security status, and offering actionable guidance to mitigate the risk of known vulnerabilities and to prevent exploitation.

All of your organisational assets are tracked within our dashboard allowing you to monitor their status and remediation over time.
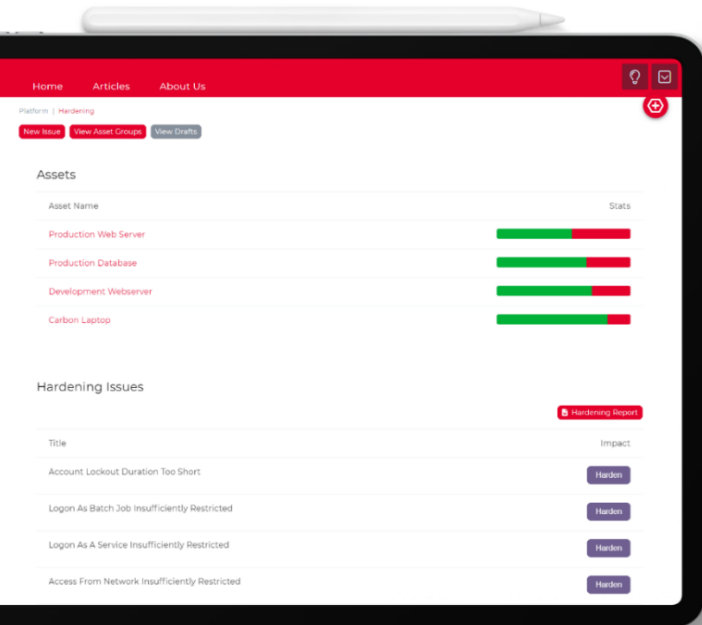

BEST PRACTICE OR COMPLIANCE

Whether you're looking to track and harden your assets for best practice or compliance reasons, our system can monitor your systems against the security requirements of your choice.

Each asset has a health bar that shows you how close it is to your compliance goal.

Our Solution

REPORTING

If you want a PDF copy of your report, we'll send you one. However, our portal-first approach to security reporting gives you a continuously updated view of your organisation's security stance.

Regardless of the type of security assessment requested, we continuously update your view of your organisation's risk via our web platform.

You can view vulnerabilities as soon as they are confirmed and you can communicate directly with the testing team – such as to request additional information or to request a retest of a remediated issue.

You can view a high-level report of the state of your systems, ideal for management meetings ,or you can drill down into the technical detail needed to remediate a complex issue.

NOTIFICATIONS

With new security issues being found constantly, it's difficult to keep track of them all or get any other work done.

That's why we've set our platform up with configurable notifications, so that you can tell us what "critical" means to your business, and we'll make sure to alert you to those issues without overloading you about minor details.

OUR APPROACH

Akimbo Core began working in 2019, to address the weaknesses in the traditional approach to security testing. With companies relying on approaches that lead to a long mean- time-to-detection and that don't take the whole organisational context into account — we wanted to do something different.

That's why we take a platform-first approach to security and continuous security testing.
